HELLO!

Hi, my name is Jacob Rockowitz.

- × I am known as jrockowitz on the web.
- × I am a Drupal developer and software architect.
- × I built and maintain the Webform module for Drupal 8.

***THERE ARE A
LOT OF RESOURCES
AVAILABLE FOR LEARNING
ABOUT THE BASICS OF
THE WEBFORM MODULE***

***ADVANCED
PRESENTATIONS
SHOULD TEACH YOU
A FEW NEW THINGS
& INSPIRE YOU
TO LEARN MORE***

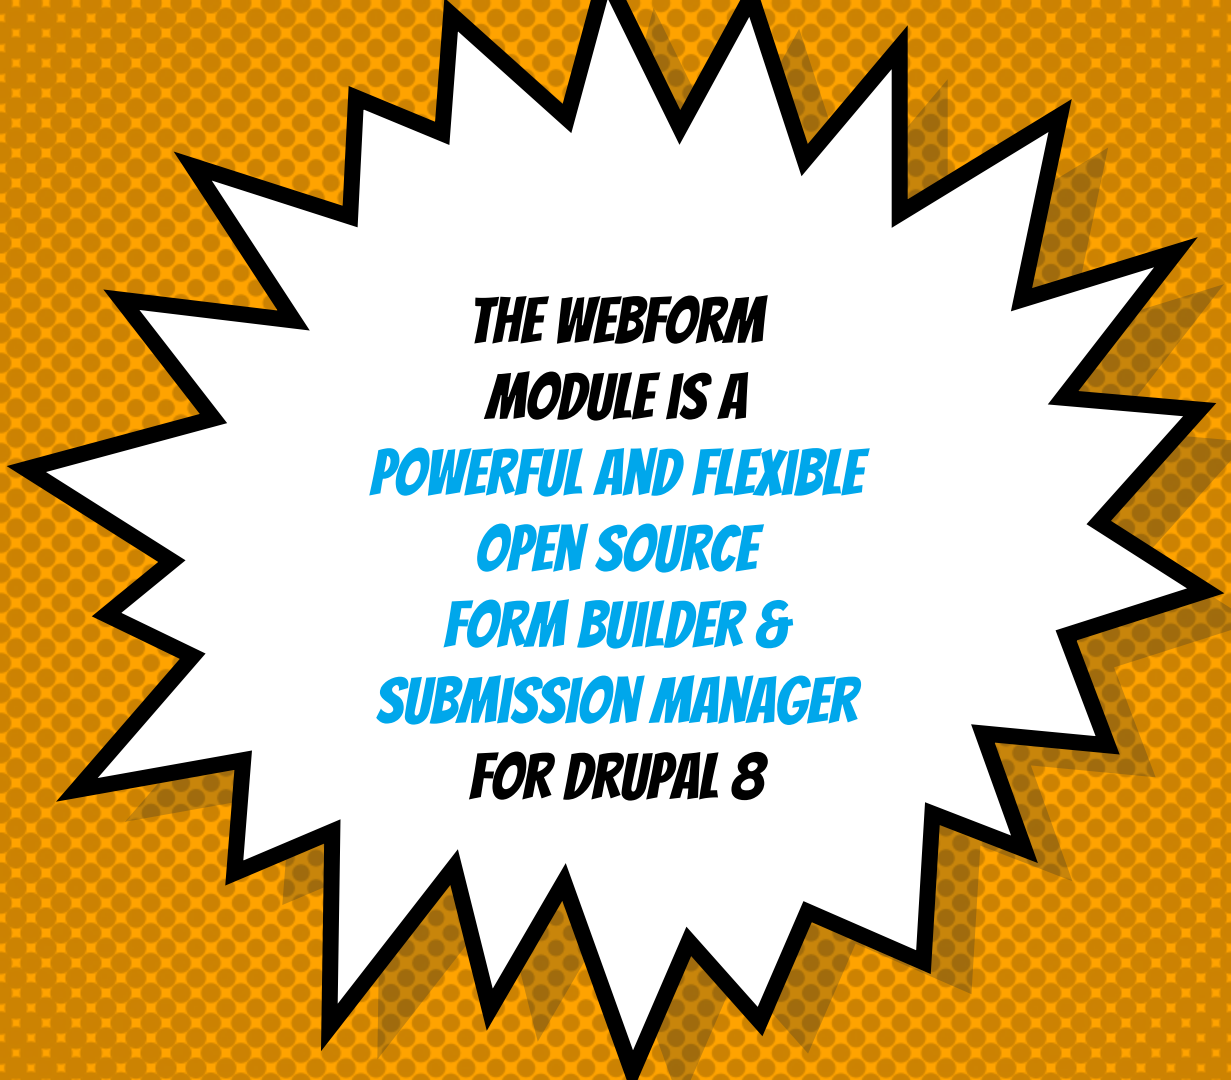

***BUILDING ADVANCED
WEBFORMS REQUIRES
LEVERAGING HOOKS,
UNDERSTANDING PLUGINS,
BUILDING RENDER ARRAYS,
& WRITING TESTS***

WEBFORM

BASICS

**THE WEBFORM
MODULE IS A
POWERFUL AND FLEXIBLE
OPEN SOURCE
FORM BUILDER &
SUBMISSION MANAGER
FOR DRUPAL 8**

***IT PROVIDES ALL THE
FEATURES EXPECTED
FROM AN ENTERPRISE
PROPRIETARY FORM
BUILDER...***

***...COMBINED WITH THE
FLEXIBILITY AND
OPENNESS OF DRUPAL***

THE USE CASE...

- × **BUILD** a form or copy a template
- × **PUBLISH** the form as a page, node, or block
- × **COLLECT** form submissions
- × **SEND** confirmations and notifications
- × **REVIEW** results online
- × **DISTRIBUTE** results as CSV or remote post

ONCE AGAIN, THE USE CASE...

<demo>

Overview: /admin/structure/webform
Build: ../webform/manage/contact
Source: ../webform/manage/contact/source
Configure ../webform/manage/contact/settings
Test: /webform/contact/test
Results: ../contact/results/submissions
Download: ../contact/results/download
Submission: ../contact/submission/1

ADDITIONAL RESOURCES

- × Webform Articles

- × Webform Videos
<http://dgo.to/2834424>
- × Webform Features (Outdated)
<http://dgo.to/2837024>

TESTING

WEBFORMS

***TESTS CONFIRM
EXPECTATIONS***

WEBFORM TESTS CONFIRM

- × Rendering: Check an element's markup
- × Processing: Check an input's default value
- × Validation: Check required error messages
- × Settings: Check labels and layout
- × Access: Check user access controls

TESTING BEST PRACTICES

- × Create a test module with exported webforms
 - × Write tests for every element and setting
 - × Establish repeatable testing patterns
 - × Organize tests into groups/subdirectories
-
- × Having easy-to-repeat manual tests is okay
 - × Some tests are better than no tests

***BY THE WAY, THE
WEBFORM MODULE
STILL USES DEPRECATED
SIMPLETESTS...***

***...YOU SHOULD
ONLY WRITE
PHPUNIT TESTS***

WEBFORM

ENTITIES

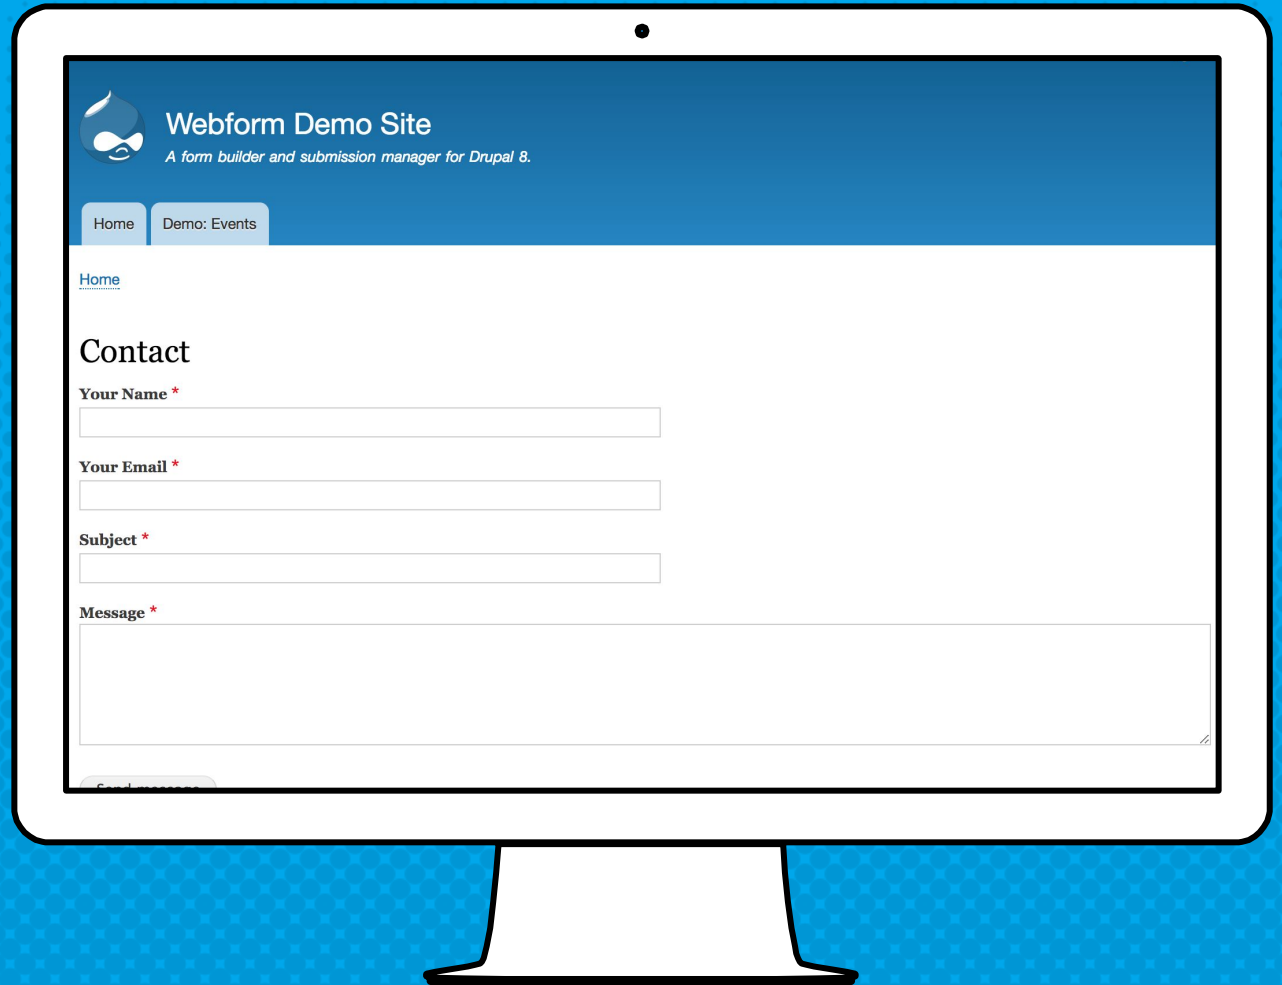

***EVERYTHING IN
DRUPAL 8 IS
AN ENTITY
(OR A PLUGIN)***

WHAT IS AN ENTITY?

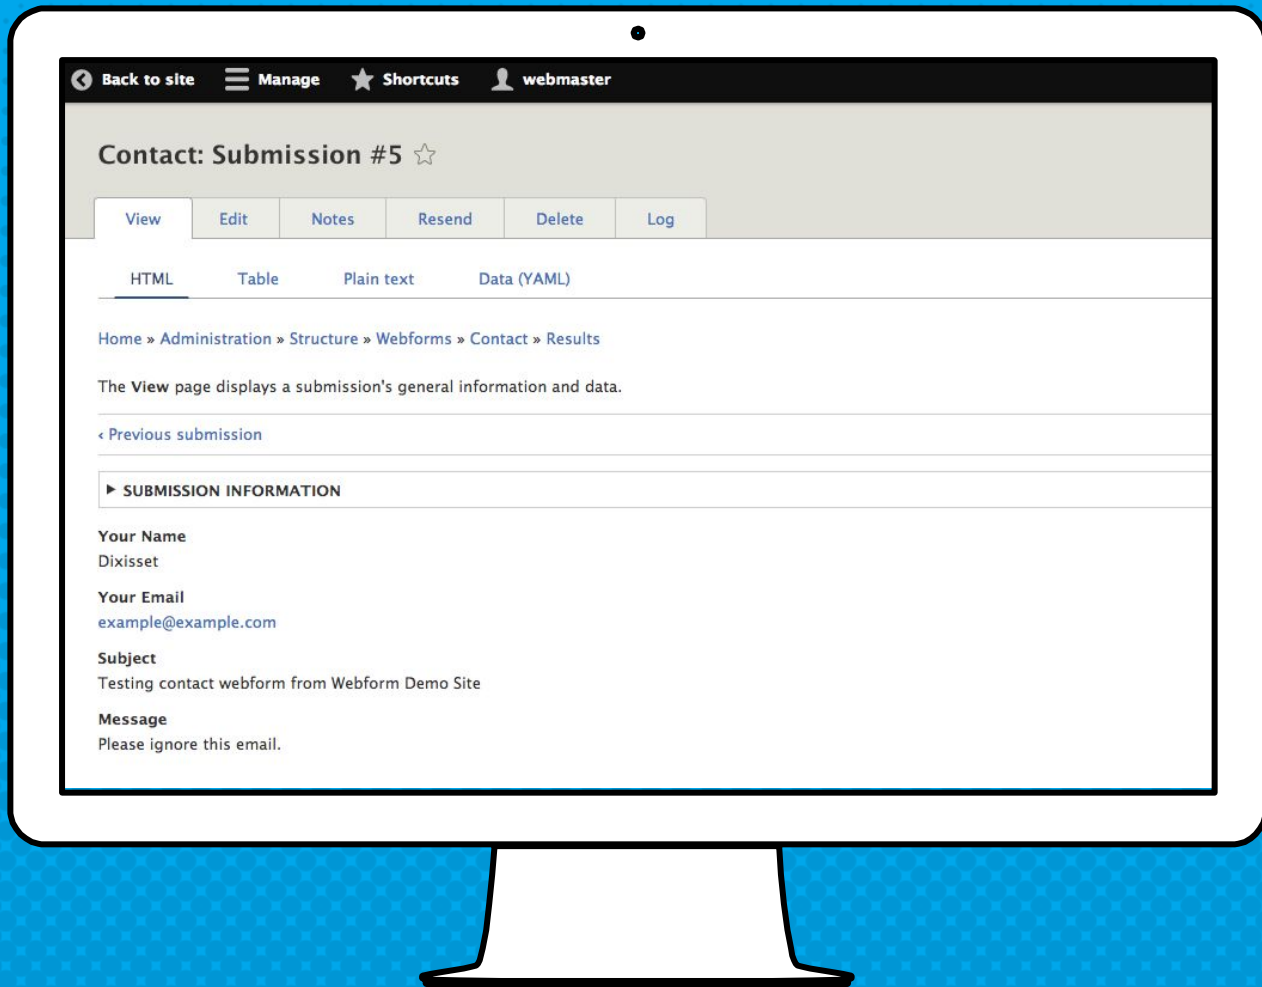

Any defined chunk of data in Drupal. This includes things like nodes, users, taxonomy terms, files, etc. Contributed modules can define custom entities. Each entity type can have multiple bundles.

-- <https://dgo.to/937>

**THIS IS A
WEBFORM
ENTITY**

THIS IS A WEBFORM SUBMISSION ENTITY

ABOUT WEBFORM ENTITIES

- × Webforms are config entities (exportable)
 - × Submissions are content entities (database)
-

- × Webforms do not use Field API
- × Submissions use an Entity-attribute-value model

ENTITY-ATTRIBUTE-VALUE MODEL

Entity-attribute-value model (EAV) is a data model to encode, in a space-efficient manner, entities where the number of attributes (properties, parameters) that can be used to describe them is potentially vast, but the number that will actually apply to a given entity is relatively modest.

-- https://en.wikipedia.org/wiki/Entity%E2%80%93attribute%E2%80%93value_model

- × Allows a webform to be reused multiple times
 - × Determined via the current route or query string
-

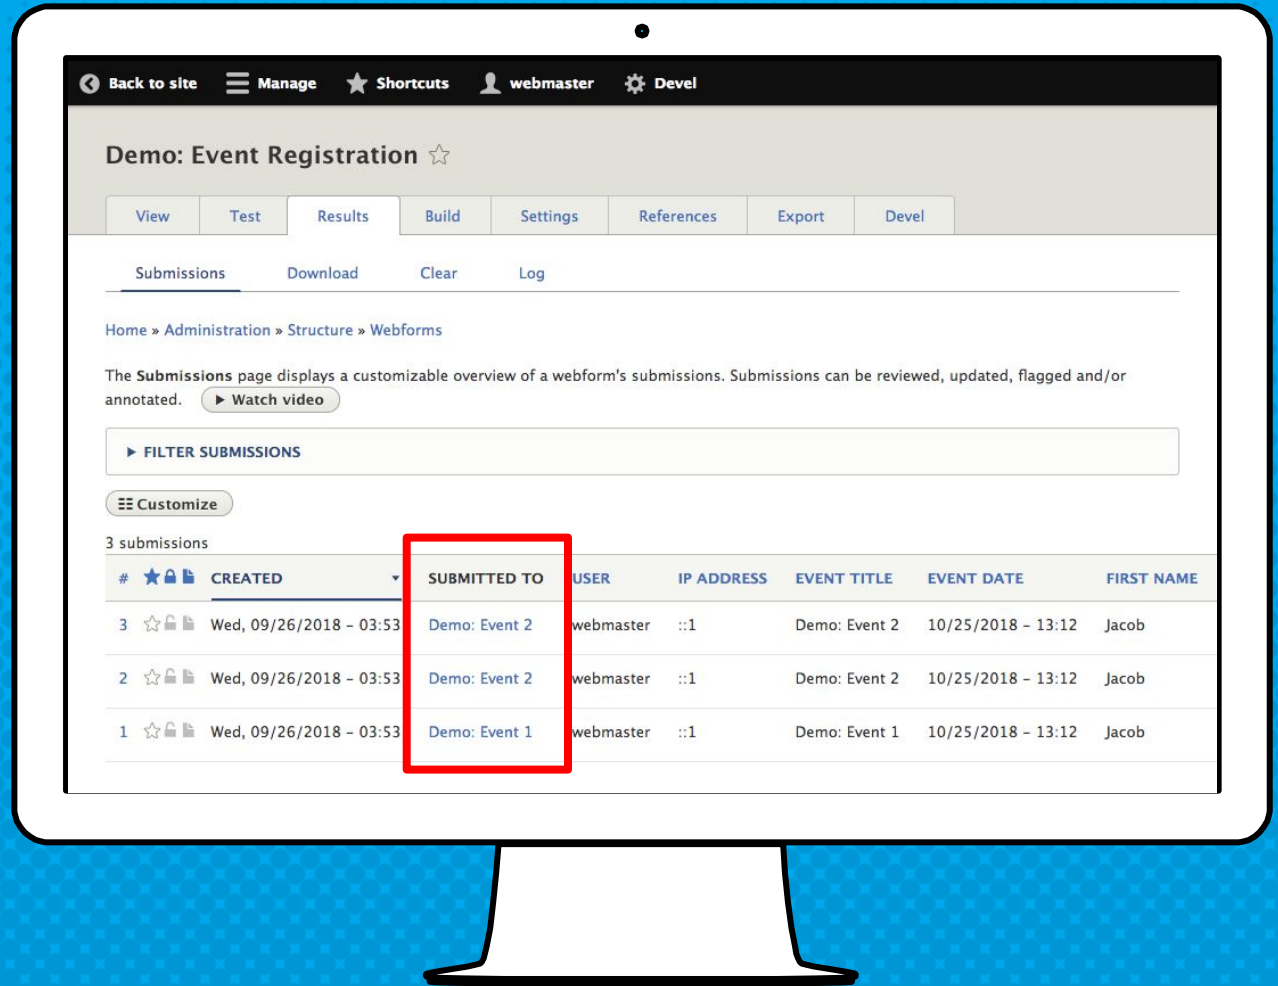

- × Webform nodes use source entities
- × Webform blocks use source entities
- × Even paragraphs use source entities

SOURCE ENTITY

THESE ARE SOURCE ENTITIES

THE SOURCE ENTITY CAN BE USED TO TRACK...

- × **Site Feedback**

A form that tracks which page the comments are related to.

- × **Event Registration**

A registration form that tracks which event a user has registered for.

- × **Application Evaluation**

An evaluation form attached to applications.

***UNDERSTANDING
FORM API (FAPI)***

**WEBFORMS ARE
RENDER ARRAYS
WHICH CONTAIN
ELEMENTS THAT
BUILD, VALIDATE, & SUBMIT
FORM VALUES
USING DRUPAL'S
FORM API (FAPI)**

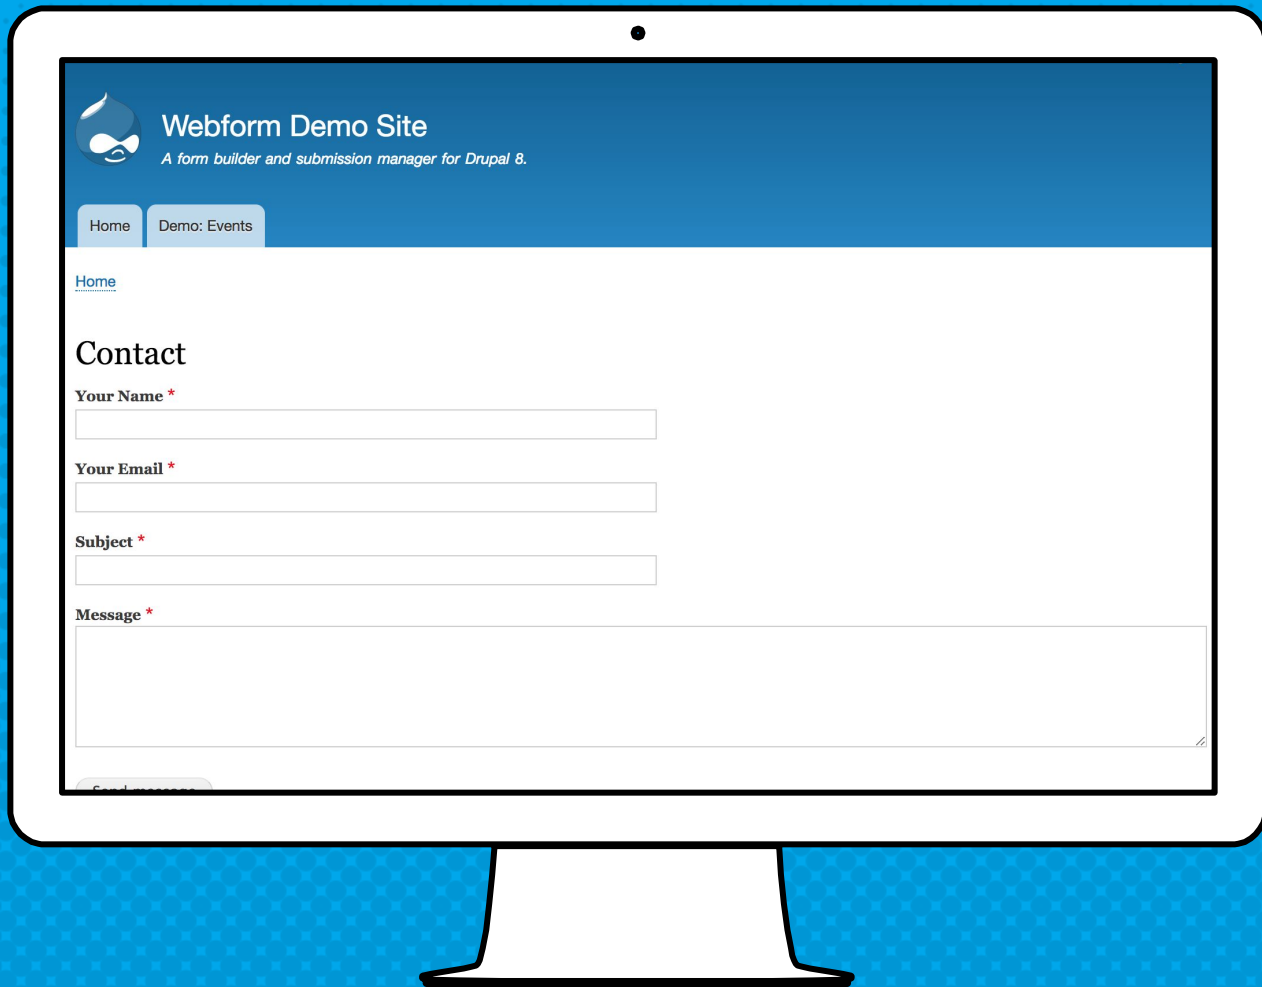

A white speech bubble with a black outline is centered on a green background with a white dot pattern. The text inside the bubble is in a bold, italicized, black sans-serif font.

***RENDER ARRAYS
ARE THE BASIC
BUILDING BLOCKS OF
DRUPAL CONTENT***

DRUPAL FORM API OVERVIEW

- × An element is anything displayed on a page
- × An input is an element that collects data
- × A composite is a group of elements
- × A form is collections of elements and inputs

**THIS
IS A
FORM**

THIS IS A RENDER ARRAY AS YAML

```
name:
  '#title': 'Your Name'
  '#type': textfield
email:
  '#title': 'Your Email'
  '#type': email
subject:
  '#title': 'Subject'
  '#type': textfield
message:
  '#title': 'Message'
  '#type': textarea
```

THIS IS A RENDER ARRAY AS PHP

```
$form['name'] = [
    '#title' => $this->t('Your Name'),
    '#type' => 'textfield',
];
$form['email'] = [
    '#title' => $this->t('Your Email'),
    '#type' => 'email',
];
$form['subject'] = [
    '#title' => $this->t('Subject'),
    '#type' => 'textfield',
];
$form['message'] = [
    '#title' => $this->t('Message'),
    '#type' => 'textfield',
];
```

FORM ELEMENTS OVERVIEW

- × Form elements are plugins
 - × Form elements extend render elements
-
- × Element properties begin with a hash (#)
 - × Elements must have keys

FORM ELEMENT PLUGIN METHODS

- × Define properties `FormElement::getInfo`
- × Set input value `FormElement::valueCallback`
- × Build input `FormElement::buildElementName`
- × Process input `FormElement::processElementName`
- × Render input `FormElement::preRenderElementName`
- × Validate value `FormElement::validateElementName`

FORM ELEMENT TIPS

- × Copy and extend existing elements
- × Use `#element_validate` to alter form values
- × For composite elements you must use `#tree`

CREATING
WEBFORM
ELEMENTS

***WEBFORM ELEMENTS ARE
WRAPPERS THAT ENHANCE
DRUPAL FORM ELEMENTS***

WEBFORM ELEMENT PLUGINS OVERVIEW

- × Requires a corresponding FormElement
- × Both plugins must use the same plugin ID (#type)
- × Handles everything related to an element
- × Base classes help organize related elements
- × Traits help group related behaviors

FORM ELEMENT PLUGIN METHODS

- × Defines default properties `WebformElement::getDefaultProperties`
- × Prepares an element `WebformElement::prepare`
- × Determine behaviors `WebformElement::hasMultipleValues`
- × Display submission value `WebformElement::buildHtml`
- × Exports values `WebformElement::getTableColumn`
- × Builds configuration form `WebformElement::form`

<demo>

Overview: `.../reports/webform-plugins/elements`

Test: `.../elements/textfield`

Plugins: `.../src/Plugin/WebformElement/`

Interface: `WebformElementInterface`

Modules: `webform_example_element.module`
`webform_example_composite.module`

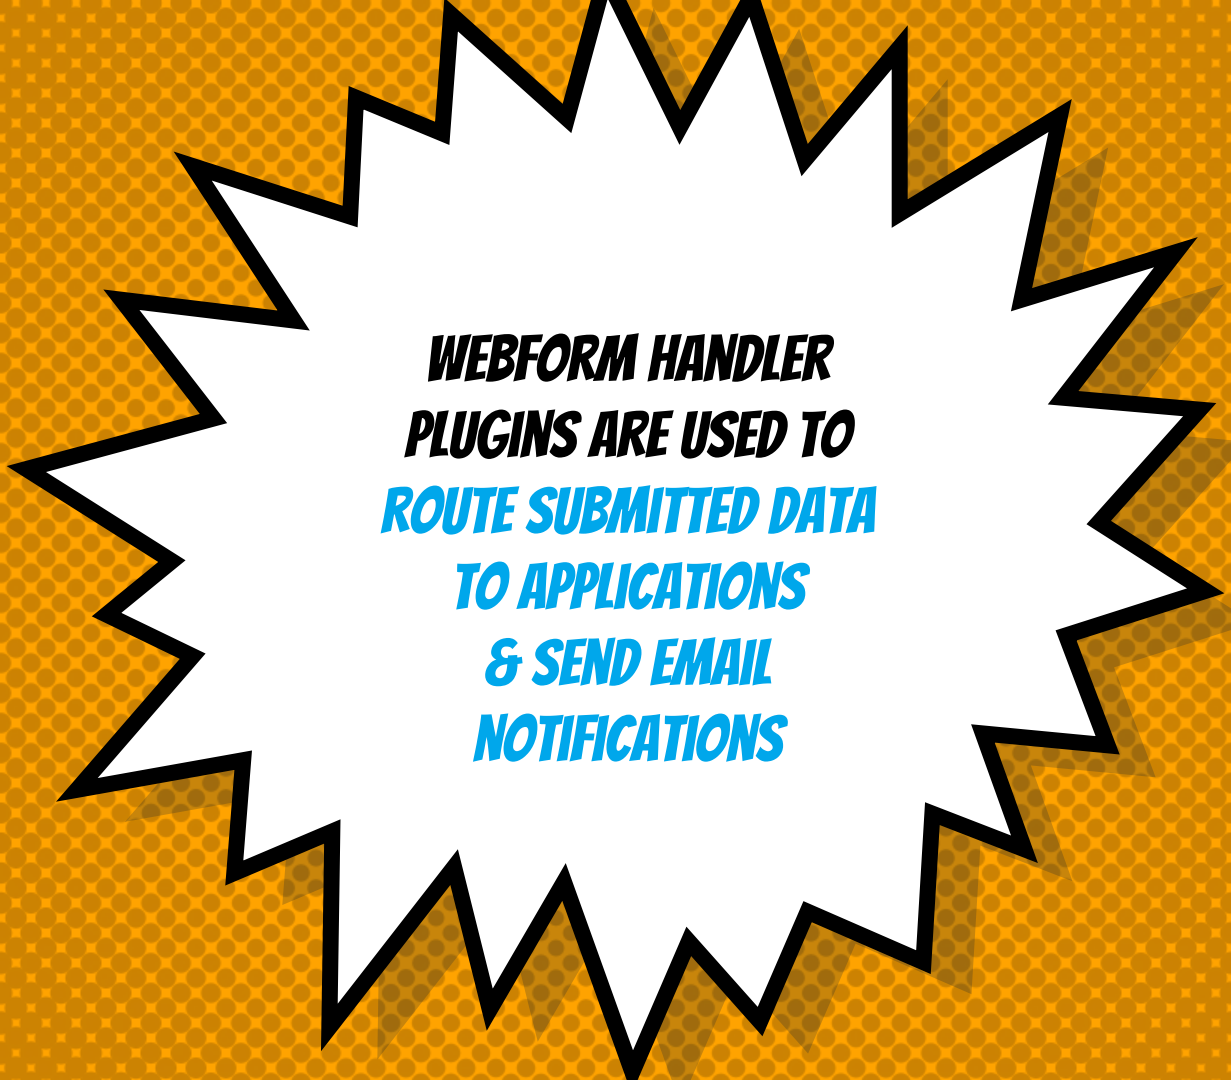

CREATING CUSTOM WEBFORM ELEMENTS

- × Create a module
- × Extend or copy existing form element plugin
- × Build a test webform
- × Define webform element plugin
- × Test webform integration
- × Write tests

Left Panel:

The Emails/Handlers page allows additional actions and behaviors to be processed when a webform or submission is created, updated, or deleted. Handlers are used to route submitted data to external applications and send notifications & confirmations.

WEBFORM HANDLER PLUGIN OVERVIEW

- × Contains methods that act like hooks
- × Reacts to a submission's state
- × Supports conditional logic

WEBFORM HANDLER PLUGIN METHODS

- × Configuration settings `WebformHandler::getConfiguration`
- × Override settings `WebformHandler::overrideSettings`
- × Alter forms & elements `WebformHandler::alterElement`
- × Entity operations `WebformHandler::postSave`
- × Element operations `WebformHandler::createElement`

INTO SPREADSHEETS
& OTHER APPLICATIONS**

THESE ARE EXPORTERS

WEBFORM EXPORTER PLUGIN OVERVIEW

- × Always extend an existing Webform Exporter
- × Use `DelimitedWebformExporter` for CSV files
- × Drush command is available for automation

WEBFORM EXPORTER PLUGIN METHODS

- × Configuration settings `WebformExporter::getConfiguration`
- × Writing data `WebformExporter::writeHeader`
- × File naming `WebformExporter::getBaseFileName`

IMPLEMENTING
WEBFORM
HOOKS

***HOOKS ARE
FUNCTIONS THAT
DEFINE OR ALTER
BEHAVIORS***

WEBFORM & DRUPAL HOOKS OVERVIEW

- × Handler plugins and hooks are very similar
- × Handlers are applied to a single form
- × Hooks can be applied to all forms
- × All entity hooks are applicable to webforms

A white speech bubble with a thick black outline is centered on a green background with a white dot pattern. The text inside the bubble is in a bold, italicized, black sans-serif font.
